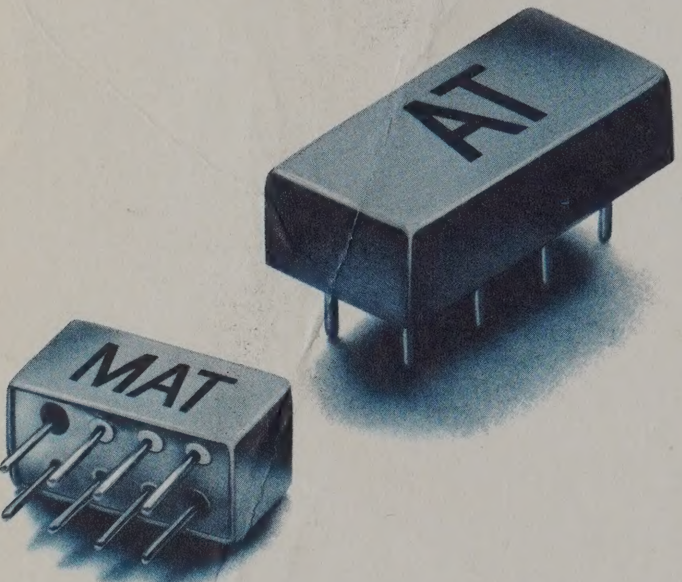
gain from attenuators ?



AT Series	MAT Series	Attenuati (dB)
AT-1	MAT-1	1
AT-3	MAT-3	3
AT-6	MAT-6	6
—	MAT-9	9
AT-10	MAT-10	10
—	MAT-12	12
—	MAT-15	15
AT-20	MAT-20	20
AT-30	MAT-30	30
AT-40*	MAT-40*	40

AT Series $3.95 (10-49)
MAT Series $4.95 (10-49)

Frequency Range DC-1500 MHz
power (max.) MAT = 0.5W, AT = 1W
*Frequency Range DC-500 MHz

YES Gain system reliability and improved performance using Mini-Circuits' low-cost, DC to 1500 MHz attenuators. Minimize interaction between subsystems (for example, mixer and amplifier) and eliminate spurious signals and oscillation by proper input/output matching. And only $1.95 (AT-Series, 1000 qty.)

Choose from over a dozen models (1 to 40 dB) in the compact AT-Series (0.8 X 0.21 X 0.2 in.) or tiny MAT-Series (0.5 X 0.21 X 0.25 in.) housed in a rugged, hermetically-sealed metal case meeting MIL-STD-202. VSWR is less than 1.2:1 (typ.), frequency response is flat ±0.3 dB (typ.), and nominal attenuation is within ±0.3 dB (typ.). Exceptional repeatability is achieved by laser trimming internal resistors.

No waiting, immediate delivery. One-year guarantee. Call or write for 64-page catalog or see our catalog in the Gold Book, EBG, EEM or Microwave Directory.

DESIGNERS KIT AVAILABLE:

KAT-1 . . . 4 of each AT (3,6,10,20 dB), only $39.95
KMAT-1 . . . 2 of each MAT (3,6,9,10,12,15,20 dB), only $39.95

CIRCULATION POLICY

EEM/Electronic Engineers Master is distributed on a controlled basis to qualified electronic product specifiers in the United States. An official subscription form is available upon request. Electronic Engineers Master is available to non-qualified personnel in the United States at $65.00 per four-volume set.

Important Notice

Some manufacturers supply pricing information in Electronic Engineers Master. Any such pricing is included solely as a guide and is not intended to be a quotation. All participating manufacturers reserve the right to change specifications and/or prices or to discontinue items without prior notice. While every precaution has been taken to ensure accuracy in content, the publisher cannot be responsible for manufacturers' claims or representations. Nor, can any guarantee be made against the possiblity of error or omission. No portion of EEM may be reproduced by any means without the prior written permission of the publisher.

how to use eem

The 27th edition of EEM has been further arranged, beyond the well-known EEM Product Sections, into four volumes, each composed of related Product Sections. And, for user convenience, each volume contains its own Product Index and Directory (green pages) and its own Manufacturers and Sales Offices Directory (yellow pages). Every Product Heading and every Manufacturer of electronic products is listed in each volume. Where, however, the Product Section is assigned to a volume other than that in use, a cross reference is made to the appropriate volume for further information.

To locate a specific product. Start by choosing the volume whose title describes the class of electronic product you are seeking. If you are not sure which volume is appropriate, pick up the first one at hand and find the product heading in the green pages. There you will find either a list of that product's manufacturers or you will be referred to the proper volume. All products are identified by their generic terms. Please read the detailed instructions on the first page of this section. Manufacturers with catalog data in this edition of EEM appear in bold face type and page numbers are shown. Manufacturers appearing in light face type have submitted verifying evidence that they supply the products shown. When you have located a product of interest, turn to the page(s) shown for further information. You will find these pages in each volume in the appropriate sections.

product selection guides

There are 33 Product Selection Guides included in this edition of EEM! They are located on the first pages of the Product Section to which they apply. Use these guides for basic selection parameters and then go to the EEM pages shown in the guide for more detailed information.

product selection index

Product Selection Index		Vol. 1A	Vol. 1B	Vol. 2	Vol. 3

advertisers' index

To find a specific manufacturer's data pages, an alphabetical index of EEM participants appears in EEM starting on page 1A•4 of Volume 1A and on pages 1B•4, 2•4 and 3•4 of the other volumes.

trademark and logofinder directories

A comprehensive trademark directory is included at the end of the EEM green pages in Volume 1B. NEW in this edition, the EEM logofinder shows the symbols and graphics used by manufacturers as identifiers on their products. Use these pages to locate manufacturers of specific trademarks and logos.

manufacturers' index

In the EEM yellow pages you will find pertinent details on all manufacturers listed in EEM including local sales offices and/or distributors. Please refer to the detailed instructions on the first page of the EEM yellow pages for additional information.

to order a product found in eem

When you have located the product that suits your needs, call the manufacturer or the local sales rep or distributor as shown in the EEM yellow pages. Give the EEM data page number and specs from that page. You and the supplier will be talking on the same wave length which should simplify your ordering and buying.

to file manufacturers' catalogs and data

The EEM File System has been revised and updated. The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multiproduct catalogs. The EEM File System is complete and can save you countless hours of time and thousands of dollars. The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

84
85 Product Index and Directory

All products are listed alphabetically by their generic names and then by subclassification. For example, look for "Fiber Optic Connectors" under "Connectors, Fiber Optic" or for "Digital Panel Meters" under "Meters, Panel (Digital)."

Following each product heading is a four-digit number directing you to the Product Section where these products are usually cataloged. If that Product Section is not in the EEM volume you are using, a "See Vol.1A, 1B, 2, or 3" will direct you to the proper volume for your product classification. No numbers appear with cross-reference headings.

Under each product heading whose Product Section appears in the volume you are using, the names of the manufacturers who supply the product are shown in alphabetical order with EEM catalogers shown first in boldface type with appropriate page numbers. Other manufacturers are shown in light face type. The symbol (§) indicates that these products are available from local distributors. The symbol (†) indicates that the product is available to MIL specifications.

Abrasive Belts, Compounds, Cords, Powders, etc.-5400 — *See Vol. 2*

Absorbers, Microwave-3400 — *See Vol. 3*

Accelerometers-5500 — *See Vol. 1B*

Acoustic CM Equipment (MIL), Airborne-3475 — *See Vol. 3*

Acoustic Systems (MIL)-3475 — *See Vol. 3*

AC Power Protection Equipment — See Line Conditioners (Vol. 3)

Actuators, Servo, Linear-4900 — *See Vol. 3*

Actuators, Servo, Rotary-4900 — *See Vol. 3*

Adapters — See Connector Adapters (Vol. 2), Plug Adapters (Vol. 2), Socket Adapters (Vol. 2), etc.

Adapters, Fiber Optic-2475 — *See Vol. 1B*

Adapters, Wall Plug-in — See Power Supplies, Plug-in (Vol. 3)

Adapters, Waveguide-3450

Regulators & Stabilizers, Voltage-4000 (Also See Transformers, Voltage Regulating; Hybrid Voltage Regulators) ***— See Vol. 3***

Relays, Antenna — See Relays, RF (Incl. Antenna & Coaxial) (Vol. 1B)

Relays, Audio Operated — See Relays, Frequency Selective (Vol. 1B)

Relays, Coaxial — See Relays, RF (Vol. 1B)

Relays, Contact — See Relays, Power (Vol. 1B)

Relays, Cradle-4500 — *See Vol. 1B*

Relays, Crystal Can, 1/2 Crystal Can-4500 — *See Vol. 1B*

Relays, Current Sensing-4500 — *See Vol. 1B*

Relays, Differential-4500 — *See Vol. 1B*

Relays, Frequency Selective-4500 — *See Vol. 1B*

Relays, General Purpose-4500 — *See Vol. 1B*

Relays, High Voltage (500 Volts & Over)-4500 — *See Vol. 1B*

Relays, Hybrid-4500 — *See Vol. 1B*

Relays, Impulse — See Relays, Stepping (Vol. 1B)

Relays, I/O Modules — See Modules, I/O Relays (Vol. 1A)

Relays, Latching-4500 — *See Vol. 1B*

Relays, Mercury-Wetted Contacts-4500 — *See Vol. 1B*

Relays, Meter-4500 — *See Vol. 1B*

Relays, Motor Start-4500 — *See Vol. 1B*

Relays, Phase Sensing-4500 — *See Vol. 1B*

Relays, Plug-in-4500 — *See Vol. 1B*

Relays, Power-4500 — *See Vol. 1B*

Relays, Printed Circuit Mounting (Including Transistor & DIP Case Types)-4500 — *See Vol. 1B*

Relays, Programmable-4500 — *See Vol. 1B*

Relays, RF (Incl. Antenna & Coaxial)-4500 — *See Vol. 1B*

Relays, Reed-4500 — *See Vol. 1B*

Relays, Sealed-4500 — *See Vol. 1B*

Relays, Sensitive-4500 — *See Vol. 1B*

Relay, Solid State-4500 — *See Vol. 1B*

Relays, Stepping-4500 — *See Vol. 1B*

Relays, Telephone-4500 — *See Vol. 1B*

Relays, Thermal-4500 — *See Vol. 1B*

Relays, Time Delay-4500 — *See Vol. 1B*

Relays, Transistor & DIP Case Types — See Relays, Printed Circuit Mounting (Vol. 1B)

Relays, Vacuum-4500 — *See Vol. 1B*

Relays, Voltage Sensitive-4500 — *See Vol. 1B*

Relays (MIL)-2440 — *See Vol. 1B*

Repeaters, Pulse — See Transponders (Vol. 3)

Repeaters, Servo-4900 — *See Vol. 3*

Resins, Encapsulating — See Compounds, Encapsulating, Molding & Potting (Vol. 2)

Resins, Synthetic — See Plastic Raw Materials (Vol. 2)

Resistance Comparators — See Bridges, Resistance (Vol. 3)

Resistor Hardware-2800 — *See Vol. 2*

Resistors, Adjustable-4700 (Also See Potentiometers; Rheostats)

MINIGLOSSARY
CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

Ceramic Capacitor Codes
(Capacitance Given In pF)

Color	Digit	Multiplier	Tolerance			Temperature Coefficient ppm°C	Significant Figure	Multiplier
			Class 1		Class 2			
			10pF or less	Over 10pF

MINIGLOSSARY
BASIC CAPACITOR FORMULAS

I. Capacitance (farads)

English: $C = \frac{.224\,K\,A}{t_D}$

Metric: $C = \frac{.0884\,K\,A}{t_D}$

II. Energy stored in capacitors (Joules, watt-sec)

$E = \frac{1}{2}\,CV^2$

III. Linear charge of a capacitor (Amperes)

$I = C\frac{dV}{dt}$

IV. Total Impedance of a capacitor (ohms)

$Z = \sqrt{R_s^2 + (X_C - X_L)^2}$

Where Rs = ESR

V. Capacitive Reactance (ohms)

$X_C = \frac{1}{2\pi fC}$

VI. Inductive Reactance (ohms)

$X_L = 2\pi fL$

VII. Phase Angles:

Ideal Capacitors: Current leads voltage 90°
Ideal Inductors: Current lags voltage 90°
Ideal Resistors: Current in phase with voltage

VIII. Dissipation Factor

$DF = \tan\delta$ (loss angle) $= \frac{ESR}{X_c} =$ $(2\pi fC)\,(ESR)$

IX. Power Factor

PF = Sine δ (loss angle) = Cos ϕ (phase angle)
PF = DF (when less than 10%)

X. Quality Factor (dimensionless)

$Q = \text{Cotan}\,\delta$ (loss angle) $= \frac{1}{DF}$

XI. Equivalent Series Resistance (ohms)

$ESR = (DF)\,(X_C) = (DF)\,(\frac{1}{2}\pi fC)$

XII. Power Loss (watts)

Power loss $= (2\pi fCV^2)\,(DF)$

XIII. KVA (Kilowatts)

$KVA = 2\pi fCV^2 \times 10^{-3}$

XIV. Temperature Characteristic (ppm/°C)

$TC = \frac{Ct - C_{25}}{C_{25}\,(T_t - 25)} \times 10^6$

XV. Cap Drift (%)

$C.D. = \frac{C_1 - C_2}{C_1} \times 100$

XVI. Reliability of Ceramic Capacitors

$\frac{L_o}{L_t} = \left(\frac{V_t}{V_o}\right)^x \left(\frac{T_t}{T_o}\right)^y$

XVII. Capacitors in Series (current the same)

Any number: $\frac{1}{C_T} = \frac{1}{C_1} + \frac{1}{C_2} \cdots + \frac{1}{C_N}$

Two: $C_T = \frac{C_1 C_2}{C_1 + C_2}$

XVIII. Capacitors in Parallel (voltage the same)

$C_T = C_1 + C_2 \cdots + C_N$

XIX. Aging Rate

A.R. = % Δ C/decade of time

XX. Decibels

$db = 20 \log \frac{V_1}{V_2}$

Metric prefixes:

Pico	X 10^{-12}
Nano	X 10^{-9}
Micro	X 10^{-6}
Milli	X 10^{-3}
Deci	X 10^{-1}
Deca	X 10
Kilo	X 10^3
Mega	X 10^6
Giga	X 10^9
Tera	X 10^{12}

Symbols:

K = Dielectric Constant
A = Area
t_D = Dielectric thickness
V = Voltage
t = time
R_s = Series Resistance
f = frequency
L = Inductance
δ = Loss angle
ϕ = Phase angle
x + y = Exponent effect of voltage and temp
L_o = Operating life
L_t = Test life
V_t = Test voltage
V_o = Operating voltage
T_t = Test temperature
T_o = Operating temperature

MINIGLOSSARY
ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise.* The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.

85 Manufacturers and Sales Offices Directory

Each manufacturer is listed alphabetically with complete address and telephone number of main offices. The names of those with data pages in this edition of EEM are shown in boldface.

Many manufacturers also show TWX and Telex numbers, FSC (Federal Supply Code), other pertinent company data, their sales and/or local distributor offices and phones. The page numbers of their data pages in this edition are shown in all volumes.

AABA COMPONENTS CORP., P.O. Box 171, Baldwin Place, NY 10505, Tel: 914-628-6952; Empl.: 15; *Sls. Mgr.:* D. McVey; *Dist. Mgr.:* D. McVey

Advertisement

CYBERNETIC MICRO SYSTEMS packs onto a single chip the intelligence and power of a board-level peripheral controller. These user-programmable chips control such devices as LCDs, motors, printers, waveforms, process monitors, parallel/serial interface, networks, etc, and include general purpose programmable controllers. Volume custom versions considered.
